Award-Winning
Technology
TPA® Technology
Traditional HEPA filters can collect pollutants that may grow unhealthy mold and bacteria over time — a risk to your health and the environment. Airdog has patented TPA® technology that destroys harmful particles and collects them on easy-to-wash collecting plates, reducing the risks of harmful particles entering lungs and the environment. Think of your Airdog air purifier as a bionic lung for your house -- we'll do all the dirty work, so you don't

have to!

A new way of life

Pollution Killer

Airdog purifier destroys the widest range of pollutants including Viruses and VOCs. It effectively filters particles down to a tiny 0.0146µm (14.6 nanometers) which is far beyond the 0.3µm (300 nanometers) that a traditional HEPA does.

By choosing Airdog, you have a cutting-edge high quality home air purifier that contributes to a happier and healthier planet.

**AIRDOG HELPS ADD
EXTRA SAFETY
DURING THE
COVID-19 PANDEMIC.**

Coronavirus (COVID-19), like the influenza virus, spreads through direct contact or airborne transmission. It could also form bio-aerosols, which live up to 24 hours in the air, so it is beneficial to turn on your indoor air purifiers and reduce pollutants and any contamination.

Airdog air purifiers have proven to be a strong fighter against the coronavirus (COVID-19) and any airborne bio-aerosols.

Third party lab tests have shown that Airdog X5 kills 99.9% of H3N2 viruses in a 30 cubic meter sealed testing room over the course of an hour. The H3N2 virus has a similar shape and bio-characteristics as the COVID-19. The high voltage inside the Airdog X5, much like bug zappers, kills and destroys viruses and bacteria. Traveling is a big part of our daily life. How can you better protect yourself when on the road? Airdog's Fit Air is a superior portable option during this critical time.
