Description: Promethazine is an antihistamine, similar to products available over-the-counter like [Benadryl](#), [Claritin](#), [Zyrtec](#), and [Allegra](#). Antihistamines are typically used to treat the symptoms associated with the allergies and the common cold—they help reduce inflammation and swelling and dry up excess secretions, for example, watery eyes and runny nose. Promethazine is also used to treat pain, nausea and vomiting, motion sickness, and sedation
